

Certified P.A.T. Testing (2 day)

FOR ALL YOUR TRAINING NEEDS....

(Portable Appliance Testing)

These courses qualify you to manage and undertake PAT testing. Every item of electrical equipment in a commercial environment is required to be PAT tested under law, i.e. it has been tested as being safe to use and has been marked safe, whether it be a kettle, toaster computer, printer, scanner or fax machine.

These practical workshops cover everything necessary to successfully achieve the certification. The course covers both a theory and practical element.

Regulations and
Responsibilities

Insulation and Earthing

Essential Tests

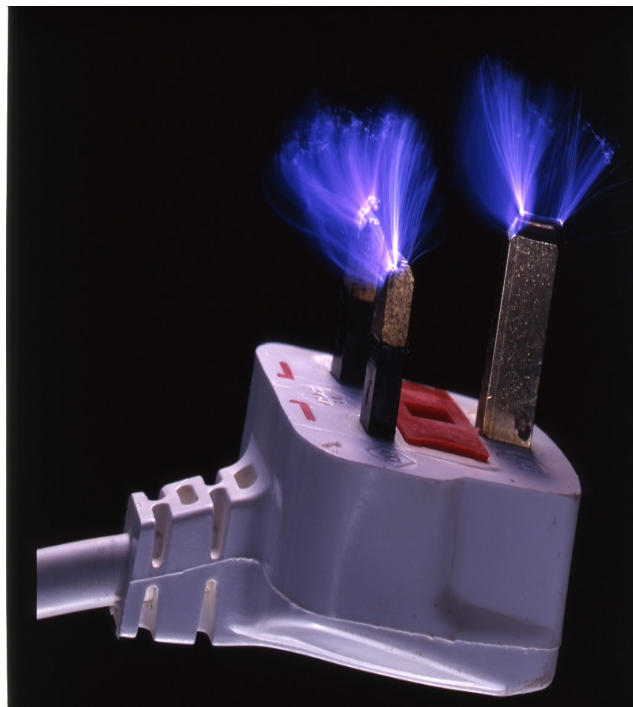

Labeling Tests

Practical Assessments

Documentation

Law and Legislation

Reporting and
Recording Results

Optional Tests

Inspection and Test Precautions

Testing of Electrical Equipment

Appropriate Test Instruments
and how they are used

Health & Safety

Frequency and Practicalities of
PAT Testing

Implementing a test programme

Inspection
